

Bridging the Gap Between PLM Technologies and Business Problems

Solving Your Complex **Technology** Problems

Whether it's a process that is causing downstream problems or a critical integration that requires two systems to exchange data in real time, Razorleaf can help you navigate tough technology challenges. We are driven to make our clients market leaders by optimizing their business processes through the use of leading PLM technologies.

Delivering An Optimal Blend of **Application and Business Process** Expertise You Can Count On

By taking a comprehensive approach that starts with a discovery process to post-implementation support, Razorleaf is uniquely positioned to accurately address technology gaps and implement successful solutions. By helping companies better understand their internal processes and technologies, we achieve new efficiencies and operational excellence. Our long history of implementing multiple technologies across a variety of enterprise platforms and databases means we will bring our proven best practices into your organization. Our expertise spans:

- Product Lifecycle Management
- Product Data Management
- BOM & Configuration Management
- Project & Program Management
- Customer Needs Management
- Supplier Management
- Process Management
- Business Intelligence
- Design Automation
- System Integration & Migration
- Staff Augmentation

Take **Advantage** of Our Solutions

PRODUCT LIFECYCLE MANAGEMENT (PLM)

PLM tools offer a collaborative platform where all historical and current product-related information resides to capture the life of the product, from technical documentation to specifications and vendor information. Razorleaf currently implements and supports: Innovator from Aras Corporation; PLM 360 from Autodesk; KONFIG from Auto-Trol; ENOVIA V6 from Dassault Systèmes; and ENOVIA SmarTeam from Dassault Systèmes.

PRODUCT DATA MANAGEMENT (PDM)

PDM systems allow you to protect, find and manage all revision and change management requests for your product files. By integrating with your enterprise-wide content-management system, PDM products make file management a simple part of your daily processes. Razorleaf currently implements and supports: Enterprise PDM from DS SOLIDWORKS; and Vault from Autodesk.

DESIGN AUTOMATION

With design automation, Engineer-To-Order and Configure-To-Order companies can reduce engineering workload and increase sales by being more responsive to client and prospect inquiries. Razorleaf currently implements and supports: DriveWorks from DriveWorks, Ltd.; Tacton Configurator from Tacton Systems AB; and RuleStream from Siemens PLM.

COMPLIANCE

Regulatory initiatives that drive new compliance requirements in the forms of reporting and traceability can be challenging to meet without the right tools in place. Razorleaf can help you extend the use of your PLM technologies to automate the process of meeting compliance reporting around issues like APQP, ITAR, CFR21 Part 11, ISO, UL, materials traceability and more.

PLACEMENT AND STAFF AUGMENTATION

Razorleaf's partnerships with resellers, software OEMs and clients have helped establish a vast network of CAD, PLM and engineering software professionals. Razorleaf leverages this network by offering staffing and placement services targeted specifically at the technology space, with focus on PLM-related placement, IT staffing, business process recruitment and engineering staffing.

DATA MIGRATION AND INTEGRATION

Having been in the industry for over 15 years, Razorleaf consultants have worked with many different systems to integrate and migrate key data for clients. In addition to the systems we deploy, we've also done migrations/integrations with the following tools and more: PDMWorks Workgroup, Meridian, Pro/Intralink, Teamcenter, Arena, Agile, DBWorks, Oracle E-Business, JDEdwards, Syteline, SAP, Visual Manufacturing, EPICOR, and QAD.

CUSTOM DEVELOPED SOLUTIONS

Razorleaf's development team is very flexible, from quickly developing simple scripts to enhancing existing products to delivering entirely new applications. The team is fluent in languages and frameworks like Visual Basic, C#, WPF/WCF, C++, .NET, and Java; works with databases including SQL Server and Oracle RDBMS; and has deep experience with platforms like Windows, Linux, IIS, Tomcat, SharePoint, Microsoft Azure, and Winshuttle Workflow (ShareVis).
