

CONSULTING SERVICE OFFERINGS

Digital Thread and/or MBE Maturity Assessment

Structured interactive consulting session to help identify key integration points or process gaps required to manage the Digital Thread and/or MBE throughout the client's organization. Razorleaf identifies the focus areas for investigation and provides a detailed report that summarizes the client's digital thread and/or MBE maturity, short and long-term vision, and recommendations to improve processes and production efficiency.

PLM Health Check

Interactive work sessions, role-based interviews, and system analysis to gather client's PLM data (infrastructure, usage, processes, practices, adoption) compared to Razorleaf's PLM best practices. We analyze the current state of the system, identify areas of exposure, and discover opportunities for improvement. Razorleaf provides a detailed report that summarizes recommendations to improve the health of the client's PLM environment.

PLM Tool Selection

Unbiased consulting session to identify the right PLM tool for client's engineering data and process. We comprehensively assess core requirements and priorities to support an RFP and vendor evaluation including requirements gathering, PLM platform summary, and vendor product demonstrations. Razorleaf provides a detailed report that summarizes recommendations to help choose the right PLM system for an organization.

PLM Road Map

Collaborative consulting session to define and analyze client's strategy and objectives to select the right technologies and define the necessary milestones. This session identifies key stakeholders, business objectives, data, and application landscapes that link business requirements, technical constraints, and timelines. Razorleaf provides a clear, defined roadmap that will help clients avoid the common pitfalls to achieve business goals.

PLM POC Quick Start

A Proof of Concept (POC) is necessary to validate PLM technical feasibility (technology and vendor) and analyze the financial viability. It identifies the gaps, risks, and roadblocks to successful implementation. Razorleaf will create a POC for a 3DEXPERIENCE installation (1 environment): a 3-week planned-non-operation (PnO) requirements definition, out-of-the-box (OOTB) configuration, and 1-week to stage data and train team. Additional options for configuration and integrations are available to help align the client's product development transformation.

Consulting as a Service

Consulting and delivery model that enables clients to evolve and adjust their agreement to meet the resource and budget needs to support the progress and completion of a project. This subscription model allows clients to take advantage of volume pricing, control and predict budget, engage technical resources as needed, and maintain continuity and intellectual property of consulting resources across multiple projects to achieve product goals.
