

## PROFESSIONAL SERVICES

Razorleaf provides clients with the flexibility to determine the type of contracts that best fit the client's business needs and budget, including T & M, Fixed Bid, Staff Augmentation, or a Subscription model (Consulting as a Service).

### Implementation

We understand that implementation is not a one-size-fits-all approach and the need to carefully integrate and safeguard complex data sets that contain the organization's proprietary product and customer information. Razorleaf has the knowledge and experience to perform detailed architecture planning and the experience to differentiate between "suggested requirements" and the realities of specific enterprise systems.

### Integration

Our consultants have been defining, developing, configuring, and integrating enterprise systems for decades, including CAD, PDM, PLM, MRP, ERP, CRM, SharePoint, legacy systems and custom applications. We understand the critical characteristics of point-to-point, hub-and-spoke, and Enterprise Service Bus (ESB) integrations. In addition, Razorleaf has developed its own proprietary integration platform called CLOVER, designed specifically to synchronize, integrate, and manage your product development data processes.

### Design Automation

We offer engineers, sales teams, distributors, and customers to design, engineer, and configure to order, on any device. Our experienced consultants offer a variety of services to automate the creation of order-specific sales documents, part and assembly drawings and models, and manufacturing data to reduce repetitive tasks, eliminate errors, increase sales, and deliver custom products.

### Migration

Our project managers, developers, and consultants have been cleaning, transforming, and migrating legacy data for decades, and have developed an internal set of guidelines and techniques for legacy data migration and ETL projects. We provide expertise in migration of version history, CAD structures, and object relationships coupled with our process to identify scope, assess data quality, define transformations, plan iteration and testing models, and document success criteria.

### Support & Training

We recognize that continued success with enterprise software requires superior ongoing product support. Razorleaf's comprehensive technical support, offers L1 – L4 Help Desk escalation to ensure the smooth operation and maximum uptime of business-critical systems. Razorleaf employs full-time, highly trained, and dedicated support teams that leverage the latest knowledge and experience from consultants in the field.

### Test Automation

We offer automated testing & validation software and services for enterprise business systems including PLM that ensure quality and compliance and guarantee successful upgrades and system updates. By automating repetitive, time-consuming tests, teams can remove bottlenecks and increase test coverage to address bugs and improve user experience. Artificial Intelligence (AI) enhances and expands tests enabling companies to perform more comprehensive tests.
