Why Use Productivity Pack?

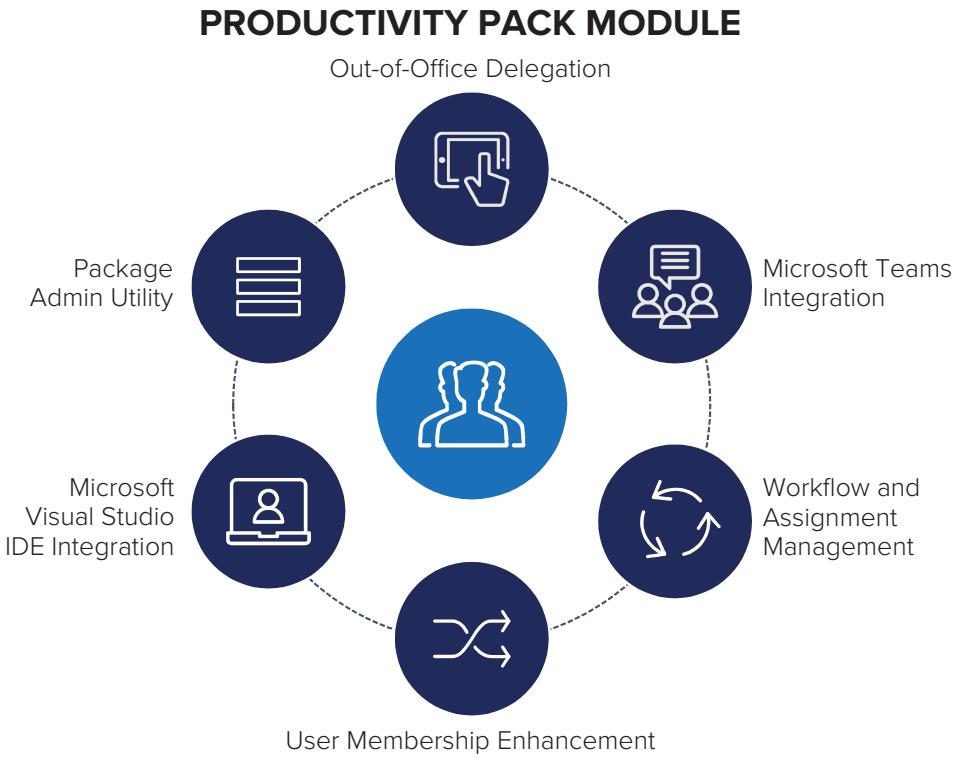
Productivity Pack extends the Aras Innovator functionality without complex customization from workflows to integration – saving time and money.

- **Administrators:** improve daily workflow and maximize response times to enhance user membership and workflows.
- **Developers:** reduce development time and ensure successful response times by reducing bugs, source conflicts, and deployment issues.
- **Employees:** enhance user experience through better schedule management and notification methods to improve daily workflow and collaboration.

Communicate Smarter with Razorleaf's Productivity Pack for Aras

What is the Productivity Pack Module

The NEW Productivity Pack Module for Aras Innovator is the latest module of Razorleaf's Manufacturing Suite. This solution enhances collaboration, improves workflow, and shortens customization release cycles. Manufacturing Suite business modules extend the power of the Aras platform and help you maximize your PLM investment.



Product development teams are becoming increasingly critical for business success. A key goal for product teams is to increase productivity through better collaboration. With improved communication tools, these teams can achieve faster time to market, identify new revenue opportunities, and create more bandwidth to enhance existing functionality ultimately improving product innovation.

The Productivity Pack is the perfect extension for Aras users, administrators, and developers to enhance their Aras Innovator experience. With new integration tools, enhanced workflows, and fewer steps to optimize daily performance, product development teams can increase efficiency with smarter communication across their organization.

Productivity Pack Key Features

- **Microsoft Teams Integration:** Avoid unseen tasks in the Aras dashboard and eliminate email “spam” notification overload by utilizing instant messaging. Users can now respond to tasks more quickly when notified in Microsoft Teams for a better collaborative method.
- **Out of Office Delegation:** Necessary approvals are performed on-time by a secondary resource without administrator intervention, ensuring rapid approvals and keeping business moving forward when an employee is unavailable.
- **Visual Studio IDE Integration for developers:** Take advantage of the powerful Visual Studio IDE for customization, including method exposure through IntelliSense, and provide developers direct access to publishing custom feature code to Aras Innovator.
- **Packaging Admin Utility:** Easily manage deployments of configuration changes with an administrator’s view of configuration changes - custom code deployments with a developer’s view of changes to packages reducing unexpected conflicts or bugs caused by new code releases or publication by multiple developers.
- **Advanced User Membership Enhancement:** Reduce time-consuming searches through groups and roles to determine a user’s permission set by displaying all membership and roles for each user.
- **Workflow and Assignment Management:** Validate that each workflow is properly assigned to the appropriate user and ensure each task is performed by the user with the required information.

Productivity Pack Key Advantages

- Improve workflows for quicker product releases and product innovation
- Accelerate development and reduce errors, minimizing developers’ effort and cost
- Streamline daily operations regardless of staff schedule to ensure workflow is uninterrupted
- Reduce costly customizations by minimizing deployment errors, avoiding miscommunication, and streamlining development operations
- Avoid missed tasks and eliminate email spam with improved notification and collaboration through Microsoft Teams
- Eliminate complex workflow changes and costly delays in the workflow process due to employee schedule constraints

Learn how the Productivity Pack extends the power of the Aras platform and help you maximize your PLM investment.
